## Removable Duct Collars

Spend less time on the ladder by easily connecting the duct-work to the collars away from the unit before it's hung, and then sliding the collars back into place once ducted.

## Intuitive Balancing

Two variable-speed motors — one for each air stream — work with the integrated speed control so installers can adjust the speed of each motor up and down to easily balance the system. This eliminates the need for adjusting dampers.

## Adjustable Hanging Straps

Just like tightening or loosening straps on a backpack, these straps make it easy to raise, lower and level the unit into place.

## Push Through—Operation System

Outside air is pushed through the heat exchanger, which acts as a noise reducer. This process is very silent and provides you with better home comfort.

## Proportional Defrost—Operation System

The defrost energy is controlled by the outdoor air temperature. The motor speed essentially increases as outdoor temperature drops to provide increased defrost capability.

**WARNING:** Installation must be performed by a qualified service technician and must comply with local codes. Remove power to the device before installing or servicing the device. Failure to connect the device according to these instructions may result in damage to the device or the controls.
