

The Code.

Effective February 2009, the International Mechanical Code and International Residential Code now require that all outdoor access ports on A/C Refrigerant circuits be made tamper resistant.

International Mechanical Code 1101.10 -

Locking access port caps. "Refrigerant circuit access ports located outdoors shall be fitted with locking-type tamper resistant caps."

International Residential Code M1411.6 -

Locking access port caps. "Refrigerant circuit access ports located outdoors shall be fitted with locking-type tamper resistant caps."

Why?

Misuse of refrigerant gas has come into sharp focus within the last few years due to reports of injury/fatality related to the venting and inhalation of the toxic refrigerant gases from A/C systems and storage tanks containing refrigerant gas.

The Novent® locking cap system was developed as a simple yet effective way to deter misuse, reduce venting and energy loss, provide protection from serious injury or liability and meet the new industry code.

NOVENT®

Locking Refrigerant Caps

IRC & IMC compliant,
color-coded refrigerant
protection.

NOVENT® products are available only to licensed refrigerant technicians and authorized personnel. They are distributed exclusively through HVACR distributors worldwide.

One simple, screw-on installation.

Instant, inexpensive protection.

Patented Novent® locking caps seal standard Schraeder service valves on all central A/C units and minisplits.

- Integral neoprene O-ring enhances seal and resists oils and chemicals
- Torque limiter prevents over-tightening
- Resists crushing & removal without key
- Corrosion resistant
- Selection of Installation tools

NOVENT®

Dual protection.

1 Gas Intoxication

Novent® caps lock. Caps are precision machined from high grade brass and surrounded by a protective aluminum shroud making it difficult to access the refrigerant. Special tools are required to apply or remove caps.

2 Gas Mixing

Novent® caps are embossed and color-coded. Proper installation safeguards against accidental mixing of refrigerant gases in A/C systems.
