

Even when your heating and cooling system isn't running, your air system will still come on as necessary to ensure that your family gets all the fresh air it needs. Best of all, you don't have to do a thing — your air system is set up to bring the proper amount of fresh air into your home automatically. The only thing you have to do is breathe.

The Importance of Ventilation

Your ventilation system ensures the exchange of stale air for fresh air, and your Honeywell ventilation system makes that air exchange efficiently, so you'll enjoy fresh air while continuing to receive the benefits of energy efficiency.

The Benefits Of A Ventilation System

Air introduced into the home through a quality ventilation system helps maintain positive pressure in the home to keep air fresher and cleaner. Ventilation also helps reduce carbon monoxide (CO) levels as well as lingering odors from smoke, food preparation, cleaning products and more.

The System Does The Work

Once we install a Honeywell Fresh Air Ventilation System, it's a simple case of "set it and forget it", because the Honeywell ventilation system we choose for your home doesn't require any work on your part. The system operates automatically — for just pennies a month — based on calculations your builder uses to customize the system for your home's size, number of rooms and local building codes.

All you have to do is enjoy the fresh air in your home.

The System May Run At Any Time

Your air system works with your heating and cooling system to exchange stale indoor air for outside air at regular intervals, but it will also work independently to ensure that your family is breathing quality air. The independent operation is your assurance that the system is effectively maintaining the exchange of stale air for fresh air. So if your furnace or air conditioner isn't running and your air system comes on, relax — it's all part of normal system operation, even at night, ensuring improved comfort and indoor air quality 24-7.

You Can Rely On Your Honeywell System

Your builder installed a Honeywell system because your builder values reliability and efficiency as much as you do. Honeywell has been the leading name in energy efficiency and home comfort for decades. You can trust Honeywell Honeywell Fresh Air Ventilation Systems for the superior air quality your family deserves.
