

ICM450A / ICM530

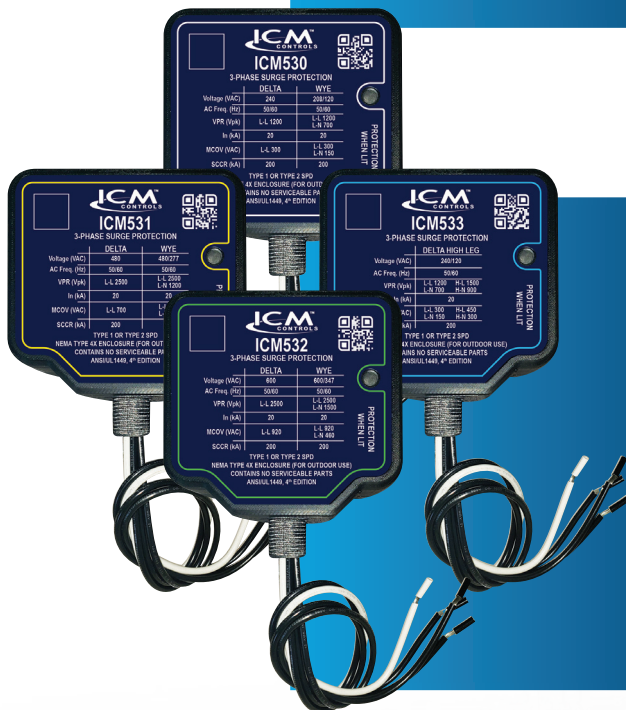

3-PHASE ULTIMATE PROTECTION WHEN USED TOGETHER

Stop Motor Burnouts!

The ICM450A and ICM450A PLUS+ are the latest 3-phase offerings, providing superior motor protection from premature failure and damage caused by common voltage faults such as phase unbalance, over/under voltage, phase loss and phase reversal.

Additionally, the ICM450A PLUS+ offers a real time clock for date and time stamp of fault events when they occur along with a Modbus RS485 communications port for communicating with a standard building management system.

Stop Surge Suppression!

Four models to choose from. Type 1 or Type 2 three-phase surge protective devices for three-phase Delta, three-phase Wye, or Delta High-leg configurations.

When a surge occurs, the ICM three-phase surge suppressor will absorb the surge up to the specified limitations of the device.
